

Dear Partners,

We are less than a month away from the launch of ExchangeDefender 7, the largest product and the largest upgrade in the company history. With ExchangeDefender 5 we changed the way you think about communications security and we made it affordable for everyone. With ExchangeDefender 6 we upgraded the entire backend of the network to sustain your growth and the emerging threats and market demands. With ExchangeDefender 7 we are introducing a brand new, unified, user experience.

Thanks to you we have the best product in the marketplace – and I mean that – as the new release was completely designed based on your feedback and all but 3 feature requests were fulfilled. We want you to have an advantage – with ExchangeDefender 7 becoming more integrated with PSAs, RMMs and cloud services, we are giving you a head start and hoping you offer us the feedback to make the imperfect areas of the product absolutely spotless.

Sincerely,

Vladimir Mazek, MCSE,
CEO of Own Web Now Corp and ExchangeDefender Chief Software Architect

Beta Guidelines

Beta sites are as follows:

- <https://v7.exchangedefender.com>
- <https://v7.webshare.exchangedefender.com>
- <https://v7.encryption.exchangedefender.com>

Reporting guidelines are as follows.

1. Beta product is not supported, support teams will not answer questions or provide live / phone technical assistance. Please use a test domain or test service provider account.
2. Beta reports are accepted through the portal (<https://support.ownwebnow.com>) and through the email (beta@exchangedefender.com). Please use the support portal and click on Resources > Bugs or Resources > Features.
3. Please provide the following information with every bug: Web browser version (Firefox 4), Platform version and architecture (ie: Windows 7 64bit), if the user is running with administrative privileges and versions of any software in which you experienced a bug.

ExchangeDefender 7 is provided as-is with no warranty, support or guarantees of any kind. Please use at your own risk only with the data you can lose.
